

# Complete Design & Engineering Solutions For All Your Industrial Needs

From the napkin sketch to the shop floor, Dees Design & Engineering provides concept design, engineering, detailing and project direction for all of your machinery and fabrication needs. For more than a decade and a half, we've worked with vendors and customers throughout the Bay Area and on the waterfront to provide effective industrial solutions.

## Specialty Services for Fab & Machine Shops:

When your customers come into your shop, waving their hands and saying "It needs to look something like this" - we can help. We specialize in taking those thoughts and napkin sketches and turning them into cost-effective, fully engineered, buildable designs, complete with drawings, solid models and digital files for CNC production—saving you time, production waste, and money.

For your machinery needs, we offer expertise in rotating machinery, shafting, hydraulics system design and integration. With our broad network of associates, we can provide power generation installation engineering and complex PLC systems engineering and control.

## Experience You Can Count On

As a degreed, registered professional mechanical engineer and AWS certified welding engineer, Brooks Dees brings formal training to bear as well as 15 years experience both on the fabrication shop floor and in the shipyard industries here in the bay area. From repair of existing legacy equipment to brand new installations, we have the down-to-earth practical solutions to get your business back into production quickly.
